environmental monitoring in parks

environment monitoring

It is a tool to assess environmental conditions and trends support policy development and its implementations

benefits of environment monitoring

- validation and verification of cleaning and sanitation programs

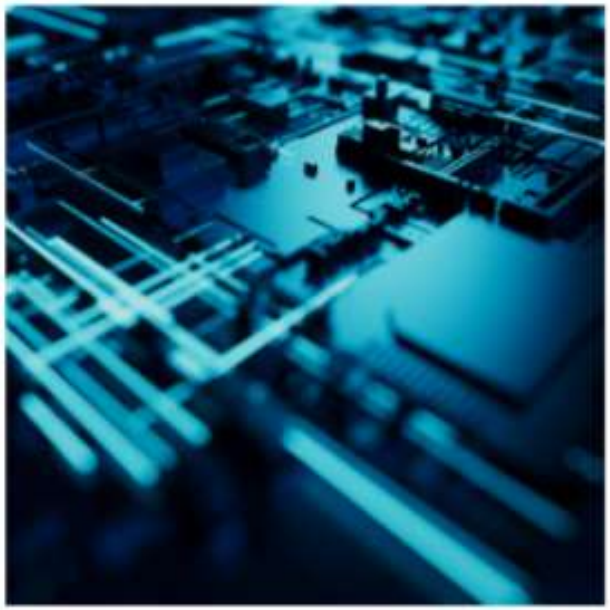
- provides data about indicator organisms ,spoilage organisms and pathogens to prevent outbreaks

example

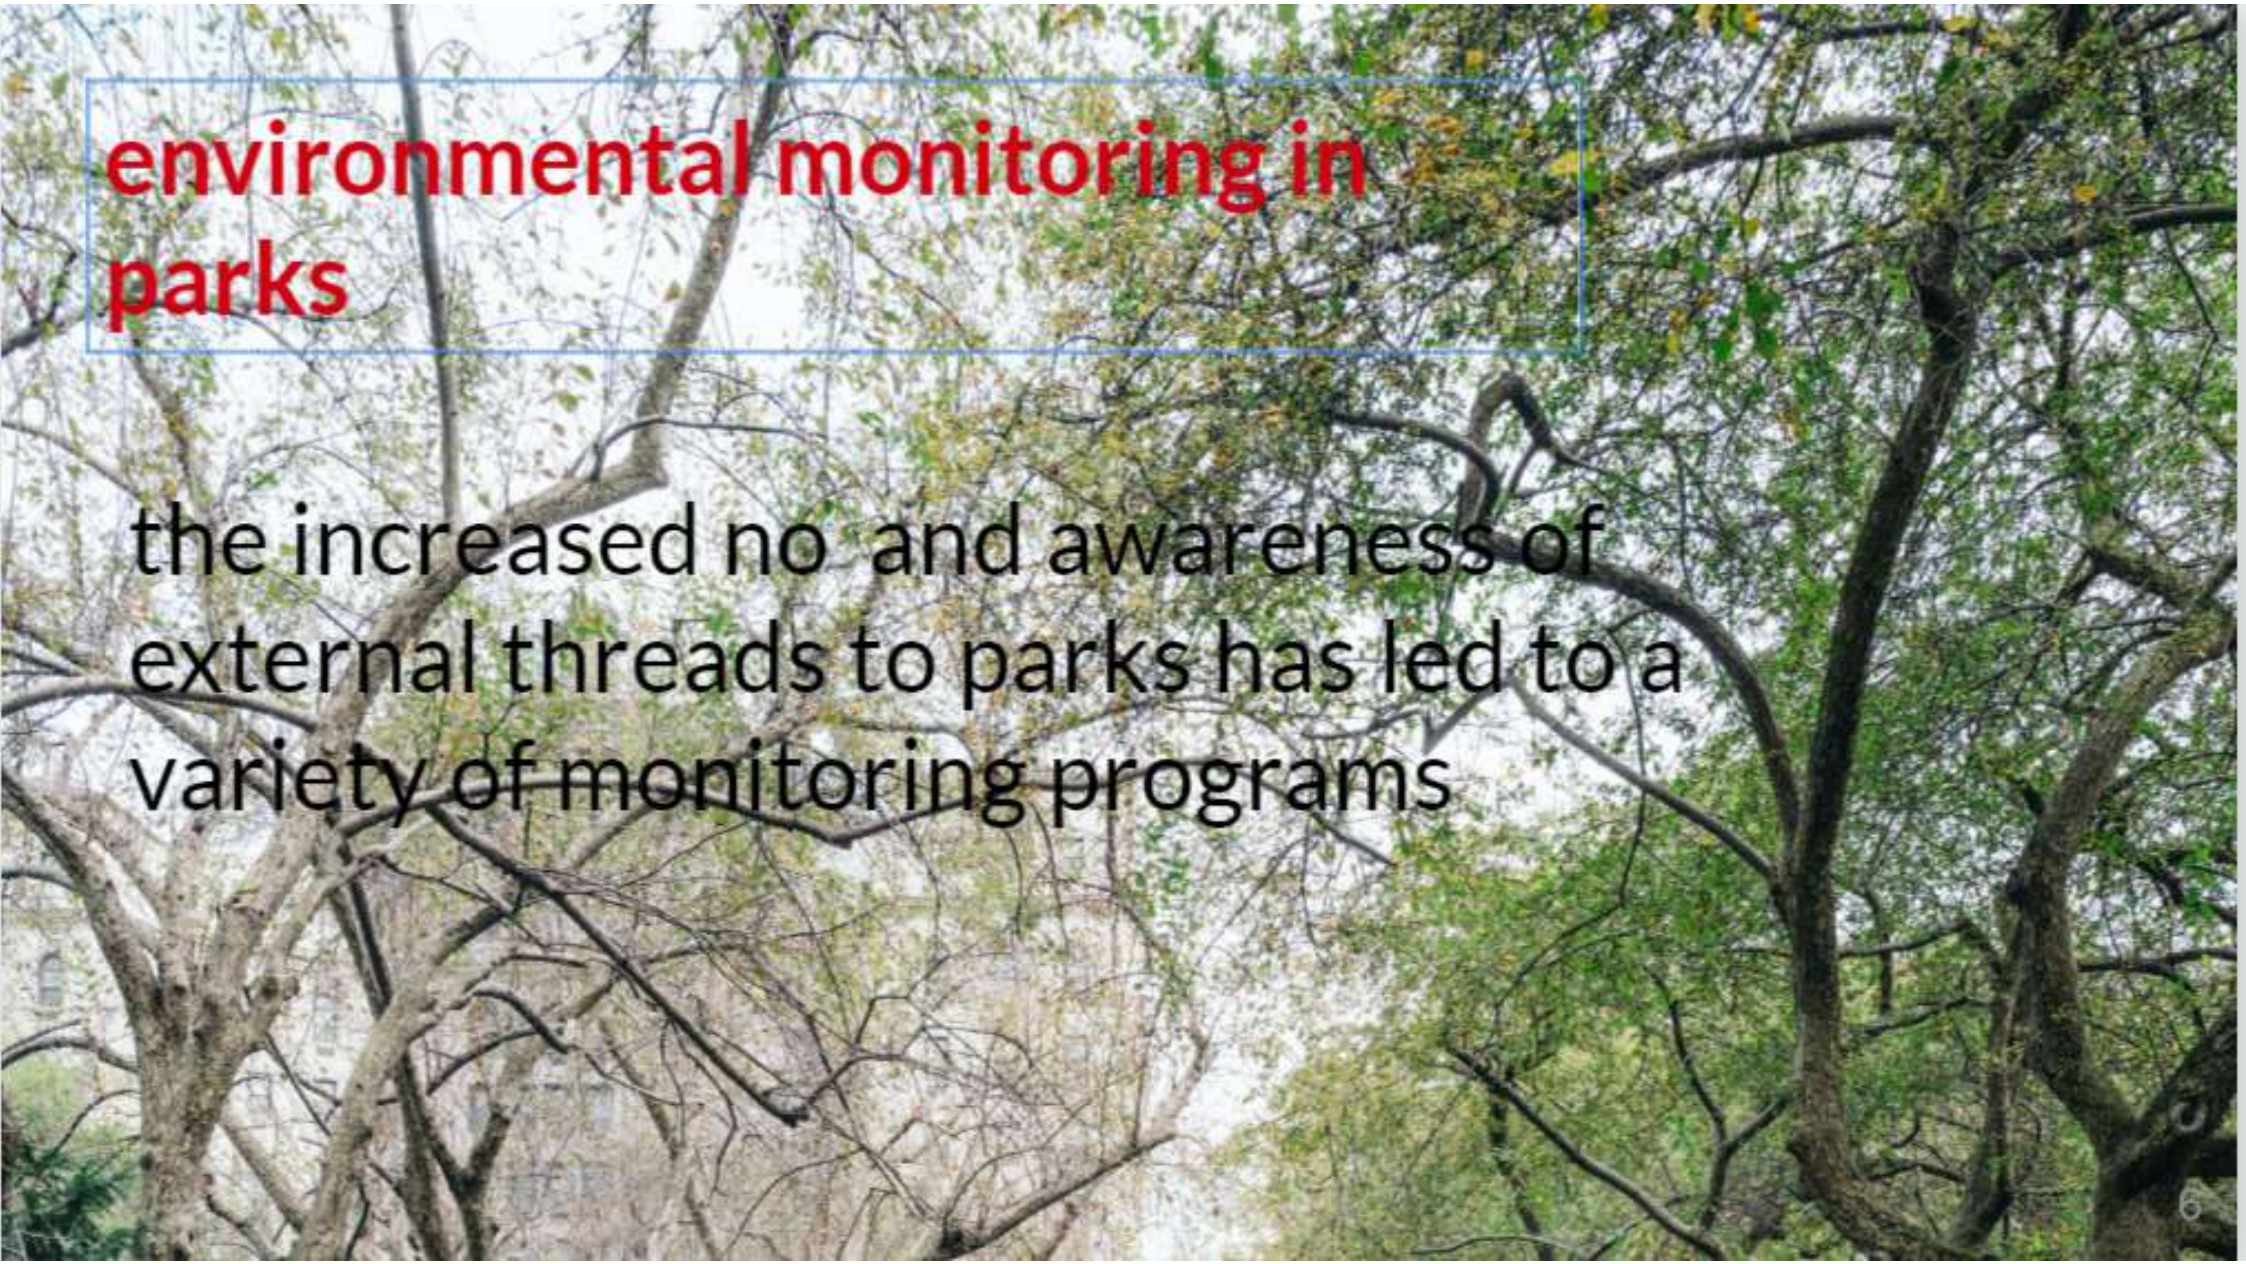
- used for ecological purposes

- effect of industrial pollution on protected areas and habitats might employ disconnected methods for the measurement of environmental conditions longterm

IOT based environmental monitoring



data captured by IOT environmental monitoring sensors from a wide variety .it can be integrated via the wireless sensor network into one cloud based environmental system



environmental monitoring in parks
the increased no and awareness of external threads to parks has led to a variety of monitoring programs

THANK
YOU
